Important. Hotspots indicate potential crop anomalies and require field verification. They are not a diagnosis.
ಇವು ಸಂಭವನೀಯ ಸಮಸ್ಯೆ ಪ್ರದೇಶಗಳು ಮಾತ್ರ. ಕೀಟ ಅಥವಾ ರೋಗವನ್ನು ಖಚಿತಪಡಿಸಲು ಹೊಲದಲ್ಲಿ ಪರಿಶೀಲನೆ ಅಗತ್ಯ.

Priority shows how urgently to inspect, not how severe a disease is. Confidence reflects image quality, agreement between the texture and vegetation-index signals, and area size; it is not a probability of damage. Kannada text is illustrative and pending review by a Kannada-speaking agricultural expert.
